- \* Measures are being taken by the newly appointed Dutch Minister of agriculture, industry, and commerce to increase the supply of edible oils in the Netherlands by making full use of the domestic beechnut crop. Between 2,000 and 2,500 metric tons of these nuts may be collected by school children if every effort is made, and from this amount of raw nuts 300,000 to 400,000 kilos of oil may be obtained. The Zuppen Gazette reports that a price of 25 florins per 100 kilos (about 5½ cents per pound at the present rate of exchange) will be paid to the gatherers. Owners of private lands from which beechnuts are gathered will receive compensation at the rate of five per cent of the sums paid to the gatherers, and they will also have the right to purchase cattle cake, prepared from the pulp of the nuts from their property, at 50 florins per 100 kilos.—Sci Am Sup

- Oil from rubber seed is a late discovery according to the Food administration bulletin. In the world-wide search for vegetable fats, new materials are being utilized. Seeds from the rubber trees on the East Indian plantations have heretofore been wasted. An experimental shipment of these seeds was recently crushed in England and yielded oil useful for various purposes, and also fodder for cattle. - A committee was recently formed in Minnesota to assist in marketing a large surplus of potatoes in that state, being called together in St Paul by State federal food administrator A. D. Wilson. Its membership represents potato growers, produce merchants, retail grocers and consumers. Preliminary recommendations were made for the greater use of potatoes in hotels and restaurants, serving them with meat orders without extra charge, greater use in homes both as a vegetable and in making bread, more energetic marketing of potatoes at once by farmers, and grading under the government standard, with attractive displays of potatoes in retail stores and a general effort to handle them on narrow margins of profit

The Southern rice growers' association has decided that the propitious time to start a rice advertising campaign is the present, when prices are soaring. The rice crop was plentiful and since rice is nutritious and its price still comparatively low, the advantages of advertising are clear. A three-year campaign has been decided on, with an expenditure of \$300,000 each year. Rice growers, millers, brokers, and manufacturers of rice-framing machinery are expected to participate.—*Business Digest*

New use for rice hulls has occasioned the installation of a plant in New Orleans to make a bone-black substitute out of rice hulls the charred rice hulls being used as a substitute for bone black in the refining of sugar. It is said that this will bring much additional revenue to the rice industry of the South, as it furnishes a commercial use for rice hulls

New York (state)—Gov. Whitman discusses the widespread discontent among the rural communities due to the passage of the so-called township law which provides for the consolidation of certain rural schools. He recommends an amendment to the law, which will still allow the citizens of a district to vote on the amount of money to be expended for school purposes, instead of leaving the financial question to be decided by the town board of education. He considers that the law has failed to accomplish properly the purposes for which it was enacted

Engaged in agriculture are 1,800,000 women. Of this number 750,000 are under 20 years old and 1,050,000 are negroes, mostly in the cotton states. These figures are sent out from Washington by the division on women's war work. The department of agriculture recommends that women be trained to manage horses so they can drive reapers, binders and cultivators; those who understand automobiles could, with a little more training operate the farm tractors.
